/note="organ: eye; Vector: pT73-Pac (Pharmacia) with a
modified polylinker; Site 1: EcoR I; Site 2: Not I;
UI-B-EJO is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. Pirst strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT773-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tags for this library are: fetal eyes, AGAATCAAGA; lens, CGATTAAGTG; retina, CGGCG; Retina Foveal and
Macular, GTCC; RPE and Chorold, ACCTA. This library was
created for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI)."

                                                                                          modified polylinker; Site 1: EcoR I; Site 2: Not I; UI-E-EJO is a subtracted CDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes, AGAATCAAGA; lens, CGATTAAGTG; retina, CCGCG; Retina Foveal and Macular, GTCC; RPE and Chorold, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI).

                                                                                                                                                                                                The present sequence is the cDNA encoding the human chisel gene (Cs1)
C that is mapped to the human chromosome Xq21.3-q22. It comprises 5 exons.
C It is a member of the BF-Hand protein super family and is involved in
Signalling pathways. It is predominantly expressed in heart and skeletal
muscles and is activated after the differentiation of cells. Cs1
C functions in regulation aspects of differentiation or adaptive processes
C that maintain muscle homeostasis. This sequence can be used in the
C detection, diagnosis, prophylactic and therapeutic treatment of diseases
Such as those involving aberrant muscle cell development and functional
activity. It is also used in the treatment of muscular and myotonic
C dystrophies, skeletal myopathies such as Duchenne muscular dystrophy and
Becker's myotonic dystrophy, heart failure, cardiac hypertrophy,
myocarditis, myofiber atrophy, etc. The Cs1 gene sequence can also be
used in gene therapy, for the production of transgenic animals and for
                                                                                                                                          Matches

                                                                                                                                                                                                                                                                           र्
                                                                                                                                                                                                                                                                                                                                                                                                                CC The patent discloses novel target genes abnormally expressed in heart CC tissues and their corresponding proteins. The invention also relates to CC methods for assessing the expression level of these genes. The method CC is used for testing the predisposition of mammals and preferably humans CC for a heart disease or for an acute state of such a disease. It is also useful to treat diseases for the heart such as congestive heart failure, CC dilative cardiomyopathy, hypertrophic cardiomyopathy, ischaemic cardiomyopathy, specific heart muscle disease, rhythm and conduction disorders, CC syncope and sudden death, coronary heart disease, systemic arterial theart disease, pulmonary heart disease, valvular CC heart disease, congenital heart disease, pericardial disease and CC endocarditis. Sequences of the invention are also used in gene therapy. A transgenic non-human mammal comprising the sequences of the invention are useful for the development for medicaments for the treatments of heart disease. The present DNA sequence is expressed sequence tag CC (EST) 66214 clone

and

diagnosing benign prostatic hyperplasia,

Å,

```
detecting expression levels of one or more genes in prostate cells from patient that are differentially regulated compared to normal prostate
```

Disclosure; Page 104; 444pp; English

The invention relates to a method of diagnosing (I) the onset or CC progression of benign prostatic hyperplasia (BPH), or screening (II) for CC or identifying an agent that modulates the onset or progression of BPH. CC The method is based on changes in gene expression in BPH tissue isolated CC from patients exhibiting different clinical states of prostate (CC from patients exhibiting different clinical states of prostate cells (II) compared to normal prostate tissue. (I) compared to normal prostate tissue or more genes in prostate cells (CC from the subject that are differentially regulated compared to normal CC prostate cells. (II) comprises preparing a first gene expression profile of EPH cells or EPH-like cell population, exposing the cells to the CC agent, preparing a second gene expression profile of the agent exposed (CC lis, and comparing the first and second gene expression of EPH. (II) is CC useful for diagnosing the onset or progression (CC lis useful for diagnosing the onset or progression (CC lis). The methods are useful to present information identifying the expression of EPH. (II) is compared to properly in a tissue or cells, by comparing the expression (CC level of genes given in the specification in the tissue or cells to the compared to the expression level in BPH. Agents using (II) are useful for creating EPH or prostate cancer. ABK64106-ABK64860 represent human CC benian prostate cancer. ABK64106-ABK64860 represent human CC benian prostate cancer. ABK64106-ABK64860 represent human CC compared to the expression level in a semisore of the invention human constatic human prostate cancer. ABK64106-ABK64860 represent human CC compared to the expression level in a semisore of the invention human constatic human prostate cancer. ABK64106-ABK64860 represent human can be semisored to the cancer of the constant of the cancer. prostatic hyperplasia gene sequences of the invention.

Sequence 587 BP; 177 A; 122 C; 103 G; 183 T; 2 other;

Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene

Claim 1; SEQ ID 2927; 44pp; English.

CC The present invention describes a method (M1) for screening for an CC anti-neoplastic agent. The method involves exposing cells to a chemical CC agent to be tested for anti-neoplastic activity, determining a change in CC expression of at least one gene (I) of a signature gene set, where (I) CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664 CC to ABL70110), or is at least 95% identical to (S), where a change in CC expression is indicative of anti-neoplastic activity. (I) has cytostatic CC activity and can be used in gene therapy. M1 can be used for screening CC an anti-neoplastic agent, and can be used for producing a product which CC is the data collected with respect to the anti-neoplastic agent as a CC result of M1, and the data is sufficient to convey the chemical CC treatment of cancer such as colon, breast, stometh, lung, thyroid, CC ceopphageal, ovarian, kidney, prostate or pancreatic cancer, CC infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine CC carcinoma, papillary carcinoma and Wilm's tumour.

Sequence 587 BP; 177 A; 122 C; 103 G; 183 T; 2 other;

```

The present sequence is the cDNA encoding the murine chisel gene (Cs1) that is mapped to the mouse X chromosome. It is a member of the EF-Hand protein super family and is involved in signalling pathways. It is predominantly expressed in heart and skeletal muscles and is activated after the differentiation of cells. Csl functions in regulation aspects of differentiation or adaptive processes that maintain muscle of differentiation or adaptive processes that maintain muscle continuous prophylactic and therapeutic treatment of diseases such as those prophylactic and therapeutic treatment of diseases such as those involving aberrant muscle cell development and functional activity. It is also used in the treatment of muscular and myotonic dystrophies, because of myotonic dystrophy, heart failure, cardiac hypertrophy, and Becker's myofiber atrophy, heart failure, cardiac hypertrophy, myocarditis, cardiac hypertrophy, for the production of transgenic animals and for drug screening.

An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain unstream reconstants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures

The patent discloses novel target genes abnormally expressed in heart tissues and their corresponding proteins. The invention also relates to methods for assessing the expression level of these genes. The method is used for testing the predisposition of mammals and preferably humans for a heart disease or for an acute state of such a disease. It is also useful to treat diseases of the heart such as congestive heart failure, collative cardiomyopathy, hypertrophic cardiomyopathy, ischaemic cardiock syncope and sudden death, coronary heart disease, systemic arterial hypertrension, pulmonary hypertrension, pulmonary hypertrension, pulmonary hypertrension, pulmonary heart disease, valvular cheart disease, congenital heart disease, pericardial disease and condocarditis. Sequences of the invention are also used in gene therapy. A transgenic non-human mammal comprising the sequences of the invention are useful for the development for medicaments for the treatments of the invention are useful for the development sequence is a cDNA from 66214 clone. This sequence used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Best

                                                                                   cobiological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in certaining RNA transcripts and splice variants of human or animal cranscriptomes. The libraries may also be used as specialised mini celetecting RNA transcripts and splice variants of human or animal celetecting RNA transcripts and splice variants of human or animal celetection of tissue- and pathological state, and so allowing the celetection of tissue- and pathology-specific genes such as those genes celetection; to detect developmental specific genes such as those genes celetection; to detect developmental specific genes and to detect RNA celetection; to detect developmental specific genes; and to detect RNA celetection; to detect developmental specific genes; and to detect may celetect genes celetection of the variants of a transcriptome of a pathent suffering celetection of the present invention.

Celetection of the present invention.

Celetectication, but was obtained in electronic format directly from WIPO at figure variation, but was obtained in electronic format directly from WIPO at figure variation, but was obtained in electronic format directly from WIPO at figure variation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    멼
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  transcription units that populate a genome. The library comprises several oligonuclectides, each capable of hybridising selectively to set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonuclectide libraries are useful for detecting mRNAs from a transcription to the property of the prop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription a genome, useful for detecting tissue-, pathology-, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human;

                                                                                                                                                                                         quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised mini libraries to detect transcripts of a sub-transcriptome under a particular biological or pathological state, and so allowing the detection of tissue- and pathology specific genes such as those genes only expressed in specific tissue under a specific pathological condition; to detect developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular disorder. ABN27253 to ABN29589 represent oligonucleotide sequences from rats, humans and mice, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                       transcription units that populate a genome. The library comprises several oligonuclectides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonuclectide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or manifestively of the services of the profile of the services.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription a genome, useful for detecting tissue-, pathology-, and developmental-specific genes

CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The polymethese are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC disorders involving aberrant protein expression or biological activity disorders involving aberrant protein expression or biological activity. CC associates of the sequences of the realist to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 11

                                                                                                                                                                                                                                                                     The invention relates to novel transgenic organisms useful in the production of functional food and drink products for the treatment cc or prevention of obesity via the regulation of lipid metabolism. The crystalisms comprise a polynucleotide encoding a growth hormone fragment cc organisms comprise a polynucleotide encoding a growth hormone fragment cc enzyme in lipolysis) and inhibiting acetyl CoA carboxylase (the key cc enzyme in lipogenesis). The growth hormone fragment preferably contains cc at least the disulphide-bonded loop of a mammalian growth hormone (but is contone to go reterologous fusion protein partner. The transgenic contone to go reterologous fusion protein partner. The transgenic corganism may be a microorganism used to produce a fermented product (e.g., yeast), or an edible plant or animal or cell thereof. Food or cratio, lipid metabolism or food use in a mammal. In particular, the food or drink products may be used to transor used to modify fat/lean cration of inventor, the human growth hormone (hgH) fragment analogue AoD9604 was carped to yeast, optionally fused to the FLAG epitope (AAB73625). The present sequence is described as a DNA sequence from yeast in the sequence listing, but is not further referred to in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABL32420;
                             genes which are modified by the methylation of cytosines. The sequence can be used in the diagnosis and treatment of immune system disorders including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myelo: leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                     Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation -
                                                                                                                                                                                                                                                                                                                                                                   30-JUN-2000; 2000DE-1032529: 01-SEP-2000; 2000DE-1043826:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens.

The present invention describes a method of screening for genes which modulate polyglutamine toxicity using animal models with polyglutamine sequences that cause toxicity in the animal. The model is preferably Drosophila, and toxic polyglutamine sequences include the human and (TPR2) and myeloid leukaemia factor 1 (MLP) genes. The model is useful for identifying treatments for neurodegenerative and proliferative disorders, including Aliheimer's disease, Parkinson's disease, Creutzfeldt-Jacob's disease (CJD), bovine spongiform encephalopathy (BSE), Huntington's disease, Machado-Joseph disease, spinocerebellar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           12-AUG-1999;

```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             April 15, 2003, 19:13:41 ; Search time 88.6305 Seconds (without alignments) 8778.558 Million cell updates/sec
